

Radiation level map of Koriyama City (The 2nd Measurement of 2017)

Calculated the average level of each section by dividing the city area into sections of 500 m (387 sections) and other areas into sections of 1 km (385 sections) based on the measurement result of radiation on the roads and public facilities. Including the radiation level before the accident (equivalent to 0.04 μ Sv/h).

- Measurement date: October 11, 2017 to January 9, 2018.
- Measuring instrument: NaI scintillation survey meter TCS-172B manufactured by HITACHI
- Measurement height: Measured at the height of 1 m from the ground at all points.
- Investigation point: 2,500points
- No. of Sections
