

Radiation level map of Koriyama City (The 1th Measurement of 2017)

Calculated the average level of each section by dividing the city area into sections of 500 m (387 sections) and other areas into sections of 1 km (385 sections) based on the measurement result of radiation on the roads and public facilities. Including the radiation level before the accident (equivalent to 0.04 $\mu\text{Sv/h}$).

- Measurement date: August 21, 2017 to October 31, 2017.
- Measuring instrument: NaI scintillation survey meter TCS-172B manufactured by HITACHI
- Measurement height: Measured at the height of 1 m from the ground at all points.
- Investigation point: 2,500 points
- No. of Sections
