

Radiation level map of Koriyama City (January, 2014)

Calculated the average level of each section by dividing the city area into sections of 500 m (386 sections) and other areas into sections of 1 km (383 sections) based on the measurement result of radiation on the roads.

Including the radiation level before the accident (equivalent to 0.04 $\mu\text{Sv/h}$).

• Measurement date: December 24, 2013 to January 20, 2014.

• Measuring instrument: NaI scintillation survey meter TCS-172B manufactured by ALOKA
• Measurement height: Measured at the height of 1 m from the ground at all points.

• Investigation point: On the roads, 1,071 points

• No. of Sections
