

Radiation level map of Koriyama City (The 1st Measurement of 2019)

Calculated the average level of each section by dividing the city area into sections of 1 km and other areas into sections of 2 km based on the measurement result of radiation.

• Measurement date

August 1, 2019 to October 3, 2019.

• Measuring instrument

NaI scintillation survey meter

TCS- 172B manufactured by HITACHI

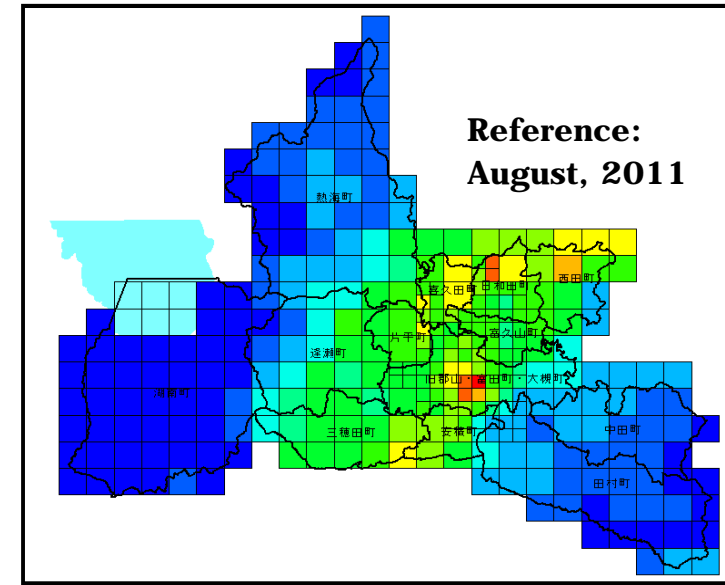

• Measurement height

Measured at the height of 1 m from the ground at all points

• Investigation point

2,500 points

Including the radiation level before the accident (equivalent to 0.04 $\mu\text{Sv/h}$).

Unit: $\mu\text{Sv/h}$
