

Radiation level map of Koriyama City (October, 2016)

Calculated the average level of each section by dividing the city area into sections of 1 km and other areas into sections of 2 km based on the measurement result of radiation on the roads.

• Measurement date

September 29, 2016 to October 8, 2016.

• Measuring instrument

NaI scintillation survey meter
TCS- 172B manufactured by HITACHI

• Measurement height

Measured at the height of 1 m from the ground at all points

• Investigation point

On the roads, 1,077 points
Including the radiation level before the accident (equivalent to 0.04 $\mu\text{Sv/h}$).
